

To all NULCA Members

***Excavation Course - Working Group
Expression of Interest***

On behalf of the President and the Committee, I am calling for members with expertise and experience in Excavation and Non-destructive Digging to form a subject matter expert working group to assist in the creation and development of the next NULCA course.

It is anticipated that the first meeting will be held on 15-16 March 2012 at JB Hunter Technology, Sydney, in the Nirimba Education Precinct, Quakers Hill.

To get the process started I would ask that if any member has any document, operating procedure, standard or other information that you have or use. In addition if you have any Utility specifications or standards, then these are also of great interest.

After I receive all the initial information I will forward copies to all those members who want to be involved before the first meeting.

After we get the planning and development for this course up and running we will then be undertaking the same process for a course in Ground Penetrating Radar.

If you think that you can help, then please do. By everyone working together we can build a stronger NULCA.
